Unreal Engine 4 12 Full Support ForUE4 includes full support for the platform, including the motion controller that comes with every Daydream set.. This required improvements to several areas from how we process and encode geometry data to enabling high resolution reflection captures of the scene.. To try it out, simply turn on Enable VR Editing in the Experimental section of your Editor Preferences.. Check out the Subway Sequencer Project on the Learn Tab of the Launcher to see Sequencer in action.

Sequencer will offer to import your existing Matinee animations when you open them, but Matinee is still supported as well.

You can select and move actors, place new objects and even access the editors UI, all while immersed in VR.. This feature currently requires either an HTC Vive or Oculus Touch development hardware.. You can easily make changes to a particular shot, like change the color of a light or add a fog element, and rollback to a previous take to experiment with how your sequence comes together.. You can even make a recording while playing back a previous recording This makes it easy to inspect and edit fine details of your level.

Check it out and send us your feedback Here are some links with lots of additional information about Unreals VR Editor.. Its also designed so that multiple artists can work on multiple shots simultaneously.. Unreal Engine 4 12 Full Support ForSequencer allows for easier collaboration on large animation projects, because you can freely organize your sequences into as many assets as you want.. Then place a Planar Reflection Actor and position it in your scene Any nearby reflective materials will automatically be affected by the planar reflection and their normals will be used to distort the reflection, allowing simulated waves.. However, the reflection quality is much more reliable than with Screen Space Reflections.. 6/23/2019:SaschaElble:In an effort to re-start this project and hopefully get more people interested in it again, and since DotCam has been missing for about a year now, a few things are going to change.. All desktop versions of Visual Studio 2015 are supported, including the (free) Express and Community editions.. Features that require a Daydream phone will simply be turned off on other Android devices. d70b09c2d4
